

Your personal invitation from
Northern Gas Networks

Your commercial
opportunities in
biomethane

26
September
2013

Lakeside Conference Centre,
FERA, Sand Hutton,
York, YO41 1LZ,
Time 08:30 to 15:30

#gastocash

www.igem.org.uk/gastocash

Come and find out how you can make money from
your current operations by producing biomethane
and selling it for injection into our network.

*An event where Northern Gas Networks
can assist you in the steps you need to take to realise
this business opportunity.*

Organised and
sponsored by

in partnership with

Benefits and opportunities of selling biomethane

Did you know that biomethane can be fed directly into our gas network and used in the same way as natural gas to provide heat and power to homes and businesses?

Injection into our gas grid could give you, as a potential producer, access to a new business opportunity.

Northern Gas Networks have undertaken a study and specifically identified you as a potential producer who could take advantage of this opportunity.

The following industry sectors will be represented:

- Arable, dairy, pig and poultry farming
- Glasshouses
- Council collected waste food
- Industrial waste food
- Water and sewage

We will walk you through the supply chain to get your gas into our network.

Why should you attend?

- Informative and insightful presentations outlining the necessary steps to make this a commercially viable undertaking.
- The opportunity to learn about the experience of producers of biomethane and what has worked for them.
- Speak to the experts for advice on planning and project management, grants, funding and licensing.
- Talk to the businesses that can supply you with the plant and equipment to make this a reality.

Don't miss out on this great opportunity!

To book your exclusive place at this FREE event, email or call **Linda Mee** at IGEM on **01509 678 184** or email: linda@igem.org.uk with your details.

About Northern Gas Networks

We look after the north of England's gas network. We transport gas safely and securely to 2.7 million properties in Yorkshire, northern Cumbria and the North East, through a vast underground pipe network.

We are taking this proactive initiative to support the growth of biomethane production in line with both UK and European renewable energy targets as set by our government regulator, Ofgem.
